

The Keystone Center Independent Science Panels on the Proposed Pebble Mine

# Responsible Large-Scale Mining: Global Perspectives

December 3, 2010, 8:00 a.m. to 5:30 p.m.

University of Alaska Anchorage Consortium Library, Room 307  
3211 Providence Drive, Anchorage, AK 99508

## *How do the experts define responsible large-scale mining?*

This day-long event will bring together international experts from conservation organizations, academic institutions, and the corporate social responsibility sector. The panel will include presentations and discussion of environmental, social, cultural and economic principles and criteria by which mining proposals and mining operations can be evaluated by communities, government, industry, and non-governmental organizations. The panel is not focused on the potential development of the Pebble mine and does not presuppose that the mine will be developed. It is focused instead on what experts have learned from mines in other locations that can help guide people throughout Alaska as they face similar questions.

**Confirmed Panelists include:** Dr. David Chambers (Center for Science in Public Participation), Dr. Catherine Coumans (MiningWatch Canada), Mr. Luke Danielson (Sustainable Development Strategies Group), Mr. Aidan Davy (International Council on Mining and Metals-ICMM); Dr. Dirk van Zyl (University of British Columbia).

**Live Webcast:** The panel event will be filmed by 360 North and streamed through a live online broadcast. Remote participants will be able to submit questions and comments by email during and after the event.

**Lunch:** Lunch will be provided for registered attendees of the panel event.

**Registration:** This event is free and open to the public. To ensure seating and lunch reservation or to receive more information on the live webcast, please pre-register at
